INTRODUCTION

SO many requests have come to us for the Plochere Color System in book form that we finally decided to complete this work in the manner displayed in this book.

The 1248 colors are represented in size 1" x 2" with 24 to each of the 52 plates. These are the same colors as contained in the Plochere Color System in boxed form with the 1248 color cards in size 3" x 5".

The formulas for mixing each of the colors will be found in the text and the color combinations for each group of eight colors are given just below the mixing table for the same eight colors.

With a few practical applications of the formulas and the color combinations, the user will quickly become expert in using the Plochere Color System.

COLOR

THE cause of all visual impressions, which we term color, is light, proceeding on its path by vibrations of the ether and coming into contact with objects reproduces them in various colors or tones in accordance with their ability to absorb or reflect the various components of light. The capacity that objects have of reflecting certain portions of light is what gives them their own local color.

This system of color is founded on the principles of Nobel Prize winner, Dr. Wilhelm Ostwald. Dr. Ostwald evolved his famous theories of color after many years of study and research in the realms of color physics, color chemistry, and finally in the field of color psychology. In his theory color is treated as a psychological sensation. Our deviation from Dr. Ostwald's famous color triangle to our rectangular arrangement is done because it seems to afford a more practical plan for displaying the entire scope of tones and shades of each hue.

COLOR TERMS

THERE are so many color terms with so many conflicting meanings that it hardly seems worth while to devote space to a discussion of them at this time. This information, if anyone wants it can easily be found in a number of volumes already on the market, or in our public libraries.

In reality there are but three qualities, or dimensions to any color. They are: hue, black and white. Hue refers to the clear color, black to the quality of visual darkness in the color and white to the amount of white the color contains. There is no other element in any color and this simple manner of designating the three elements of any color is concise, accurate and easily understood by anyone.

Because of their wide use and gaining popularity it seems advisable to mention the following terms:

TINT: Any clear hue with the addition of white.

TONE: Any hue with the addition of gray.

SHADE: Any hue with the addition of black.

COLOR NAMES

ALL of the 1248 colors in this work are named. One of the first things a person usually asks when looking at a color is, "What do you call this color?" Because of this wide spread interest in the names of colors we have gone to considerable trouble to apply the known historic or romantic name to each of the hues, tints, tones and shades. When it was impossible to find a given name, or an accepted name, we used a title that would conjure in the mind of the reader that particular color. If one is told a color is comparable to, or is called, "Cherry", or "Blackberry Cream", or some such descriptive title there is instantly brought to mind a mental image of the color under discussion.

There is also a strong psychological association that will give a mental image of the desired tone . . . such an example would be the name "Mystic Purple" . . . Geographical names are often adequate to place a color and the name "Grand Canyon Clay" would certainly give a lucid idea of the color to be associated with that name.

Many sources were tapped to supply this great number of color names and it would be impossible to give all of them; however, a short list may prove of interest to the reader and possibly increase interest in this facinating endeavor. This list will be found in the Bibliography at the end of the text.

PIGMENTS

PIGMENTS have changed drastically during the past few years, and many basic colors formerly on the market are no longer available. It is also true, and unfortunately so, that each manufacturer's colors differ so much from all others in hue and tinting strength (even if the same name appears on the label) that desired results can not be obtained from given formulas.

It is true that most all colors can be mixed in more than one way. In other words, by taking any good pigments one can, after some effort, get a pretty good match for any color. However, it saves a good deal of time and considerable color if one can arrive quickly at the desired result.

In building this color system we started many months ago to gather our materials. Because we wanted to put into this system all of the finest ingredients possible we formulated our own ideas of pigments and had them ground to our own specifications. There are nine colors, plus black and white, used in mixing the 1248 colors in this set. These colors are called PLOCHERE SPECTRA HUE COLORS and are named as follows:

Primrose Yellow	Spectra Rose	Raw Sienna
Spectra Yellow (Hansa Yellow)	Spectra Blue (Ultramarine)	Raw Umber
Spectra Red	Monastral Blue*	Black
	Brilliant Green (Monastral Green)	White

PLOCHERE SPECTRA HUE COLORS were developed only after diligent research to condense and simplify the tedious task of mixing and remixing to get a certain color. Only the purest pigments are used in grinding Spectra Hue Colors. They are especially developed of 100% Pure Color and all of the pigments are the finest for fastness to sunlight and resistance to alkali. All hues are chemically pure and the very best that science can produce. The White is a non-yellowing white and care should be exercised when mixing these colors to use a comparable white paint. As there is no such color as pure black we had a color mixed which we term Black and which is called Black in this system.

We do not claim perfection in the mixing tables but if they are carefully followed the results will be all that can be desired.

We wish to re-emphasize that it is possible to mix the 1248 colors in this system with other pigments than the PLOCHERE SPECTRA HUE COLORS although it would probably be easier for almost anyone to use our nine basic colors.

The formulas in THE PLOCHERE COLOR SYSTEM are computed by volume quantities.

Extra color cards in size 3" x 5" may be purchased. These cards are the same size as the cards in the Plochere Color System in Box Form. We do not guarantee exact matches in re-orders of color cards as over a period of time they may vary slightly.
